## Profile

I am a full stack software development professional who has been building web and cross-platform apps for more than a decade. My experience spans across various industries, including e-commerce, hyperlocal delivery, finance, market research, and data privacy. I specialize in writing high-performance and maintainable code. The apps I have developed have reached and delighted millions of users, resulting in steady revenue for the businesses involved.

## Skills

### Languages

JavaScript, TypeScript, Kotlin, GoLang, Ruby

### Frameworks, Platforms, Libraries

Spring Boot, NodeJS, Ruby on Rails, Laravel, React, React Native, AWS

### Architecture

GraphQL, REST, Automated tests, Performance Optimization, CI/CD, End to end type safety

## Work Experience

2024/05 – present  
Bangalore, India

### Founding Member, Stable Alpha Technologies Pvt. Ltd.

Stable money is an FD & bond booking platform. I work across the stack (Kotlin, Java, Flutter/Dart, React) to implement new features and improve developer experience.

- Architected and developed the bonds marketplace using React
- Developed the spring boot based personalization service to provide custom user experiences based on dynamic cohorts
- Leading the efforts to streamline CI, CD, IaC
- Leading the flutter app performance improvement efforts involving both backend and frontend

2022/04 – 2023/11  
Vancouver, Canada

### Technical Team Lead, Rival Technologies Inc.

Rival is a research community and conversational insights platform, built with AWS serverless backend and React frontend. I lead a team of five people to develop various features focused on research authoring, distribution, and responding. A few projects I lead were:

- Developing the redesigned chat based research responding experience using ReactJS which resulted in user delight
- Improved and modernized the drag and drop interface on research authoring UI
- Adding numeric data type to the platform. This involved working on various NodeJS microservices

2019/11 – 2022/01  
Bangalore, India

### Engineering Manager, Jupiter (Amica Financial Technologies Pvt. Ltd.)

Jupiter is a financial solution that helps you save, invest, and manage your money all in one place.

- I developed the retail banking application using React Native, which is utilized by over two million users
- I built an app called Bullet using Flutter, which offers a "buy now, pay later" feature, within a month
- I coded multiple features, including a design system, onboarding process, analytics integration, and user preferences
- In addition, I mentored other developers, established coding patterns, and conducted code reviews

- I set up the development and testing processes for the app, which encompassed continuous integration, automated testing, and feature flags. This resulted in a smooth and continuous delivery of the app
- Furthermore, I collaborated with backend teams to create a backend for the frontend service. This service aggregated responses from multiple microservices and delivered optimized responses to the mobile app, enhancing the user experience

2017/01 – 2019/11  
Bangalore, India

**CTO, Lounge Ecomm**

Entrée (an Embassy Group venture) is a Bangalore-based food delivery platform that offers carefully curated culinary experiences while maintaining high F&B service standards. I joined as CTO and primary developer, building a comprehensive food ordering and delivery system that generated over 22 million INR in revenue.

- In this role, I developed the customer ordering app, restaurant app, delivery app, and admin dashboards for both mobile and web platforms, using technologies such as Laravel, PostgreSQL, PostGIS, React, and React Native.
- I successfully solved complex challenges, including tracking delivery agents in low-connectivity areas, ensuring fair distribution of deliveries, and accurately estimating delivery times.
- Additionally, I implemented analytics, monitoring, and error tracking systems to proactively enhance performance and improve the overall user experience.

2014/09 – 2016/12  
Bangalore, India

**Senior Software Engineer, Langoor**

Langoor is a digital marketing agency, which offers website and webapp development services among its other solutions. I lead the framework team to develop web apps using Ruby on Rails, Laravel, and AngularJS.

Some of the major projects I worked on include developing RedBus singapore website (AngularJS), Practo doctor app (Objective C), Kaapad eCommerce (Ruby on Rails).

## Education

---

2012 – 2014

**Master of Business in Information Technology, Assam Downtown University**
